Dear Sir,

Sub: Glenmark Pharma is first to launch a Triple-drug FDC of Tenzeligliptin + Dapagliflozin + Metformin in India for Type 2 Diabetes in Adults with Co-morbidities

With reference to the subject mentioned above, kindly find attached media release which is self-explanatory.

Request you to kindly take the same on record.

Thanking you,

Yours faithfully,
For Glenmark Pharmaceuticals Limited

Harish Kuber
Company Secretary & Compliance Officer

Encl.- As Above

Glenmark Pharma is first to launch a Triple-drug FDC of Tenueligliptin + Dapagliflozin + Metformin in India for Type 2 Diabetes in Adults with Co-morbidities

- Zita[®] DM is the brand name for the first triple-drug FDC of Tenueligliptin, Dapagliflozin, and Metformin in India.
- Zita[®] DM helps improve glycemic control in adult patients with high HbA1c and/or other co-morbidities, those patients whose diabetes is uncontrolled by metformin; and also those who require the addition of Tenueligliptin and Dapagliflozin as separate drugs, thereby improving adherence with a single dose pill.
- Priced at INR 14 per tablet (per day), it will lower the daily cost of therapy by 30%; making it affordable.

Mumbai, India, October 18, 2023: Glenmark Pharmaceuticals Limited (Glenmark Pharma), a research-led, global pharmaceutical company, has launched in India the first triple-drug fixed-dose combination (FDC) of the widely-used Tenueligliptin with Dapagliflozin and Metformin. This FDC has been launched under the brand name Zita[®] DM, and it contains the DPP4 inhibitor, Tenueligliptin (20mg), the SGLT2 inhibitor, Dapagliflozin, (10mg), and Metformin SR (500mg/1000mg) in a fixed dose. It must be taken once daily, under prescription, to improve glycemic control in patients with Type 2 diabetes.

On the occasion of the launch, Alok Malik, President & Business Head - India Formulations, Glenmark Pharma stated, "India has the second-largest diabetic population in the world and Type 2 diabetic patients here often face issues of uncontrolled Hemoglobin A1C (HbA1Cⁱ), beta cell dysfunction, which impairs insulin secretion, along with other co-morbidities like weight gain. Diabetes management, hence, becomes difficult for these patients and a challenge for healthcare providers. Being a leader in treating diabetes, we are proud to introduce Zita[®] DM, a novel and affordable anti-diabetic drug, which helps improve the glycemic control among adult patients with high HbA1c and other co-morbidities; while also reducing major renal and cardiac adverse events. With this robust profile, we are positive Zita[®] DM will facilitate patient adherence to chronic diabetes treatments."

Glenmark's Zita[®] portfolio of medicines have been benefiting around 1.75 million Type 2 diabetic patients annually, in India. With the launch of Zita[®] DM, Zita[®] the most comprehensive gliptin range now holds promise of helping Type 2 diabetic patients at every stage of their treatment.

According to IQVIA™ sales data for the 12-month period ending August 2023 (MAT August 2023), the market for oral anti-diabetic drugs in India is estimated to be INR 12,522 crores, with an annual growth of 6.5% against the corresponding period last year (MAT August 2022). As per the ICMR-INDIAB study conducted between 17th October 2008 and 17th December 2020, the overall weighted prevalence of diabetes was 11.4%.

Glenmark's Leadership in the Diabetes Segment

Glenmark has a strong legacy of bringing in new, effective, and affordable treatment options for diabetic patients, especially with uncontrolled Type 2 diabetes. In 2015, Glenmark was the first to launch the DPP4 inhibitor, Tenueligliptin (Zita Plus[®] and Ziten[®]), followed by a FDC of Tenueligliptin + Metformin (Zita-Met Plus[®] and Ziten-M[®]). Glenmark later introduced Remogliflozin (Remo[®] and Remozen™), a novel SGLT-2 inhibitor in 2019; and subsequently, its combinations (Remo-V[®], Remozen™-V, Remo MV[®], and Remozen™ MV). Glenmark followed that up with the launch of Sitagliptin (Sitazit[®]) and its FDCs in 2022. Then came Loxoglitalone (LOBG[®]) and additional FDCs of Tenueligliptin, including its combinations with Pioglitazone (Zita Pio™), Pioglitazone + Metformin (Zita[®]-PioMet), and Dapagliflozin (Zita-D™).

---End---

About Glenmark Pharmaceuticals Ltd

Glenmark Pharmaceuticals Limited (BSE: 532296 | NSE: GLENMARK) is a research-led, global pharmaceutical company, having a presence across Branded, Generics, and OTC segments; with a focus on therapeutic areas of respiratory, dermatology and oncology. The company has 10 world-class manufacturing facilities spread across 4 continents, and operations in over 80 countries.
